Introducing HiSeq™ 2000
Redefining the trajectory of sequencing.

What if you could:
• Sequence a normal and a cancer human genome at 30x coverage?
• Perform gene expression profiling on 200 samples?
• Sequence a genome on one flow cell and its epigenome and transcriptome on the other flow cell?
Each in a single run?
Now you can with HiSeq 2000. It’s a new standard in output, user experience, and cost-effectiveness.
Sequence on a scale never before possible.
Learn more at www.illumina.com/HiSeq2000

It’s more than genetic analysis.
It’s the unstoppable drive to know more.
To find answers. To be the first.

The power of sequencing. The speed of arrays.
Limitless applications harnessed with intensity and implemented with imagination.

The intangible force that fuels the dynamic Illumina Community.

That’s genetic energy™
