Introducing
QuantStudio™ 12K Flex Real-Time PCR System

Do what you never thought possible. With 5 interchangeable blocks, you can analyze from 1 to over 12,000 data points per run in any assay format that is right for your project. The QuantStudio™ 12K Flex system transforms the leading real-time PCR platforms into a single platform combining maximum throughput, scalability, and flexibility. Now, targeted discovery, confirmation, high-throughput screening, and everything in between, can be done on a single system.

PGM™ for genes. Proton™ for genomes.

Sequencing for all.

Powered by fast, simple, scalable semiconductor chips, the Ion PGM™ Sequencer introduced an entirely new approach to sequencing, making it dramatically faster and more accessible.

The new Ion Proton™ Sequencer will go even further. With chip densities up to 1,000-fold greater than the Ion PGM™ Sequencer, the Ion Proton™ Sequencer will put whole-genome sequencing within reach of every lab.

Get fast, affordable benchtop sequencing at lifetechnologies.com/ionsequencing
TaqMan® Mutation Detection Assays
Powered by castPCR™ technology, TaqMan® Mutation Detection Assays offer high sensitivity and specificity compared to other mutation detection products. The assays have been shown to detect at least 0.1% mutation in a background of wild type gDNA, as demonstrated in artificial template and cell line gDNA spiking experiments. And just like all TaqMan® Assays, you can go from sample to results typically in less than 3 hours with minimal hands-on time.
