BD Horizon™ BV dyes are extremely bright - four to ten times brighter than conventional dyes - providing the high-sensitivity fluorescence needed to resolve dim populations. These violet-excitible polymer-based dyes, developed in collaboration with Sirigen based on Nobel Prize winning chemistry, are now part of BD Biosciences. A range of conjugates to both BD Horizon BV421 and BD Horizon BV605 provides you with more bright color choices and maximizes your flexibility in multicolor panel design.

Add Brilliant new Dimensions to your Multicolor Panel

Find out all the specificities available for BV421 and BV605 at bdbiosciences.com/eu/reagents/brilliant
