QIAGEN — tools to simplify the complexity of your cancer research

As your partner in cancer research, QIAGEN provides a unique range of sample and assay technologies that support all major areas of research, from identifying cancer genes to discovering epigenetic and other determinants of cancer. These solutions include:

- PCR array-based gene expression profiling of cancer-related biological pathways
- Enrichment of target cancer genes for next-generation sequencing
- Complete solutions for elucidating the role of miRNAs in cancer
- Mutation, copy number variation, and methylation analysis of cancer-related genes
